Course

Programming 3

ISW-311

Teacher: Alejandro Alfaro Quesada

Students: Anthonny Calderón y Roger Oporta

Project: Flight Management

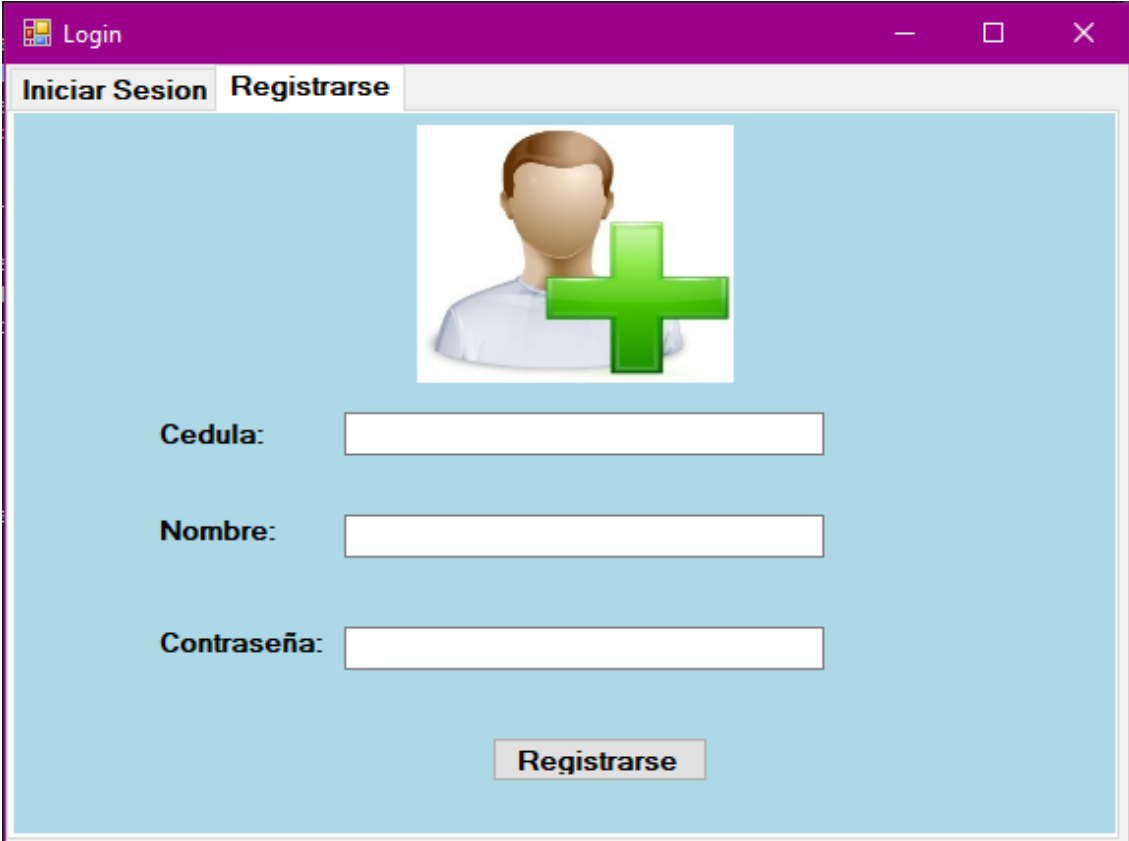

Delivery: 13/03/2018

4 quarter 2017

Introduction

An application was developed in programming language c # connected to a database to store information, the application consists of where the user searches for a hotel of his preference to book and stay, where he also chose the country, place of destination among other things, as well You can choose the type of vehicle you prefer and the type of flight

The beginning of the application the user can register to enjoy the application.

The image shows a web application window titled "Login". It features two tabs: "Iniciar Sesion" and "Registrarse". The "Registrarse" tab is currently selected. The main content area has a light blue background. At the top center is a placeholder image of a person with a large green plus sign overlaid. Below this are three input fields labeled "Cedula:", "Nombre:", and "Contraseña:". At the bottom center is a button labeled "Registrarse".

Contraseña:

Registrarse

The user after registering can initiate session.

A screenshot of a web application window titled "Login". The window has a purple header bar with standard window controls (minimize, maximize, close) on the right. Below the header, there are two tabs: "Iniciar Sesión" (selected) and "Registrarse". The main content area has a light blue background. On the left, there is a 3D illustration of a man and a woman in business attire. To the right of the illustration, there are two input fields. The first is labeled "Cedula:" and the second is labeled "Contraseña:". Below these fields is a button labeled "Ingresar". In the bottom right corner of the main area, there is a button labeled "Salir".

If the administrator starts the section, the system will detect in real time the type of user, the next window is from the administrator, here is where he will give maintenance to the system.

The administrator will have a choice of reports, here you will see all the information of the users, according to the corresponding report.

When the client enters the following window will be displayed, where the student chooses the option that he will perform.

In the hotel option the user will choose by search according to what he needs.
